Command Equivalence

Intuitively, two commands are equivalent if they produce the same result under any store...

Definition (Equivalence of commands)

Two commands c and c' are equivalent (written $c \sim c'$) if, for any stores σ and σ' , we have

$$\langle \sigma, \mathbf{c} \rangle \Downarrow \sigma' \iff \langle \sigma, \mathbf{c}' \rangle \Downarrow \sigma'.$$

Command Equivalence

For example, we can prove that every **while** command is equivalent to its unfolding:

Theorem

For all $b \in \mathbf{Bexp}$ and $c \in \mathbf{Com}$ we have

while b do $c \sim$ if b then (c; while b do c) else skip.

Proof.

We show each implication separately...
